

Step 1 — Find Apache VM Public IP

You already have:

40.67.138.103

This IP will be allowed.

Step 2 — Open Azure Portal

Open:

[Azure Portal](#) ↗

Navigate:

App Services
→ Your Web App
→ Networking
→ Access Restrictions

Step 3 — Add Allow Rule

Click:

+ Add Rule

Configure:

Field	Value
Name	Allow-Apache-VM
Action	Allow
Priority	100
Type	IPv4
IP Address	40.67.138.103/32

What /32 Means

40.67.138.103/32

means:

- allow EXACTLY this IP only

Step 4 — Add Deny All Rule

After allow rule:

Add another rule:

Field	Value
Name	Deny-All
Action	Deny
Priority	200
IP Range	Any

Result

Now:

Access Source	Result
Apache VM	✓ Allowed
Direct Internet Users	✗ Blocked

Final Secure Flow

Browser

Apache VM (OIDC)

Azure Web App

Direct access becomes impossible.

What Happens Now

If user opens:

<https://webodic-d9fjhcdcd5b9bcfc.westus3-01.azurewebsites.net>

they will receive:

403 Forbidden

BUT:

<https://40.67.138.103>

will still work because:

- Apache VM IP is allowed
